25

1. A dental head unit capable of measuring a root canal length of a patient, comprising:

a head section having a sleeve rotatably supported therein for detachably holding a cutting tool therein;

a neck section extending proximally from said head section and having a proximal end for connecting to a handpiece body;

a contact capable of detachably contacting the cutting tool for providing electric connection to the cutting tool when in contact; and

a contact holder fixed to a proximal end of said contact and axially slidable with respect to said neck section, said contact holder has a lead attachment to which a lead for electrically connecting said contact to a root canal length measuring device is detachably attached.

- 2. The dental head unit of claim 1, wherein said contact comprises two rods, each having a distal end portion configured to disengageably hold said cutting tool between said two rods.
- 3. The dental head unit of claim 2, wherein said two rods are arranged on opposite sides of said lead attachment.
- 4. The dental head unit of claim 1, wherein said contact holder is provided on and around said neck section.

- 5. The dental head unit of claim 1, wherein said lead attachment is a hole provided in the contact holder.
- 6. A contact holder assembly for use with a dental head unit of claim 1 having a head section and a neck section, comprising:

a contact capable of detachably contacting a cutting tool held in a head section of a dental head unit for providing electric connection to the cutting tool when in contact; and
